ABOUT

EYLENE PIREZ

Eylene Pirez is a world travel photographer and published physicist. She resides in California working in film and photography. Using her graduate degree in Physics, she focuses on climate issues and science adventure. She has worked on imaging systems on-board the NASA's Cassini spacecraft, dark matter experiments and particle accelerator technologies for state-of-the-art applications in several areas of scientific research. Eylene is the host of the Astrophysics eHow video series which has reached all continents of the globe. Eylene was born in Cuba and grew up under harsh political restrictions which has driven her passion for world travel and exploration. Practicing outdoor sports such as mountaineering allows her to travel to hard to reach locations and capture unique experiences.

Eylene has led treks across the Sahara desert, summit some of the world's tallest mountains, backpacked through Iceland and many others countries. Known for her minimalist and solo style travel, she is also a leader and educator in the outdoors community.

Eylene is the lead guide and organizer of SoCal's hiking and mountaineering club with over 300 members. She is also an Arc'teryx La Brea brand ambassador and plays a role in content creation and in-store events. Her travel photography has led her to become a member of the Access Collective, a diverse team consisting of National Geographic photographers, professional athletes, filmmakers, and extreme adventurers. Most recently she has been working on documentaries such as Access Chile; Exploring south America's most remote regions in the name of science.
