Testosterone is a steroid from the androstane class containing a keto and hydroxyl groups at positions three and seventeen respectively. It is biosynthesized in several steps from cholesterol and is converted in the liver to inactive metabolites. It exerts its action through binding to and activation of the androgen receptor. #doctor #mbbs #gmcbbhopal #bbhopal #stethoscope #medical #medicallife #futuredoctor

Testosterone is a steroid when it is used in high doses without a doctor's prescription. Not only do anabolic steroids help increase muscle mass and strength, but they also cut back on recovery time, enabling the user to push themselves harder and longer in workouts. What are the risks involved with using testosterone as a steroid? Testosterone is a naturally-occurring hormone made by your gonads. It's classed as a steroid as it contains a sterol ring structure and is made from sterol lipids. Anabolic-androgenic steroids are synthetic derivatives of testosterone. They are used by some bodybuilders and athletes to 'cheat' their normal blood testosterone levels.

Testosterone is the major sex hormone in males and plays a number of important roles, such as: The development of the penis and testes The deepening of the voice during puberty The appearance of facial and pubic hair starting at puberty; later in life, it may play a role in balding

And testosterone, to be clear, is a form of anabolic steroid - the same kind athletes have been known to use illegally. TRT is used to help men achieve natural levels of testosterone within the...

So, why should you even care about all of this testosterone stuff? Well, the one (and I can't believe this hasn't been studied more) main study on testosterone levels in men found that there's a 1.2-1.3% decline in testosterone across ALL AGES! Testosterone is the hormone that makes you a man. High natural T levels improves your body composition, mental health, energy, and risk of disease and cancer. Low levels essentially make you a degraded version of yourself. Who wants that? Yet, few people are showing guys the NATURAL ways to increase their T levels so they can THRIVE as men. What man wants to be weak, fat, and impotent - or at least a sub-par version of who he can be? Get your hormones in order (check for one of the most important things you can do in the next post) - AND GET A COPY OF MY FREE BOOK, THE MAN DIET (LINK IN BIO). Source-@chadhowse

Testosterone is known as a natural steroid hormone produced in your body. It aids in promoting bone density, producing sperm in the testes, and stimulating muscle growth and strength. Conclusion.

Testosterone is the dominant sex hormone in man, made naturally, while steroids are synthetic hormones that aid in bodybuilding and enhancing muscle mass. #personaltrainer #personaltraining

Yet not everyone agrees with this classification.

"Patients on ventilators will die within minutes," says Dr Sumit Ray of the Holy Family Hospital, as the city hospitals tackle severe oxygen shortage. | @sood.vaishali Testosterone is a naturally occurring sex hormone that is produced in a man's testicles. Small amounts of testosterone are also produced in a woman's ovaries and adrenal system. Testosterone injection is used in men and boys to treat conditions caused by a lack of this hormone, such as delayed puberty or growth. COVID-19 vaccine self-scheduling is now available.
