## Don't Throw This Away, Landfill Decomposition Rates

Written by: Clay Miller

The next time you throw something away or better yet, buy something, think about where the item will end up when you are done with it. If you don't reuse or recycle that item, it probably will end up in a landfill. Once in a landfill the only thing left for it to do is decompose.

Decomposition rates (rate at which it will totally break down into the earth) of items in landfills will vary depending on the amount of sunlight, moisture and air exposure it receives. Some of these time ranges are very rough estimates.

The following breaks it down for you:

**Apple core:** 1 to 2 months, can take longer in landfills due to lack of microbes

**Glass bottles:** tens of thousands of years, glass is made from sand and it can outlast most anything.

**Plastic drinking bottles:** hundreds of years, consist of polyethylene terephthalate (PET) which is made from petroleum, which won't break down.

Autoflowering cannabis plants develop predictably and reach full maturity in approximately 10 This quick life cycle is convenient for growers who want to harvest Indoor cultivators have to invest in expensive grow lights and adhere to strict schedules with photoperiod Autoflower cannabis eliminates this

Autoflower Seed to Harvest Time Considering the above, autoflowering strains from RQS have a seed to harvest time of between 8-14 This is much faster than the vast share of photoperiod varieties, however, genetic variation means some strains take longer than Autoflower Timeline

## Autoflower Temp and Humidity: With Real-Life Examples - Weed KB

Number one is light, number four is CO Autoflower temp and humidity requirements are practically the same as for cannabis plants in Autoflowers thrive with day temperatures around 23-28°C (73-82°F) and a drop of no more than 5-10 degrees at The humidity should be ideally between 40 and 60%

## How To Cure Autoflowers | Our Guide On Growing And Curing - The Seed Fair

Cannabis buds can be dried in racks or by hanging them upside down in a Mostly drying takes about 7-12 days, depending on factors such as temperature, humidity, size of the bud, and method used for By using the wet trimming method, your buds are ready for the curing process immediately after

# What is the best light cycle for autoflowering cannabis plants?

## THESE ARE THE FACTORS THAT DETERMINE GROUT DRYING TIME

### FIRST FACTOR: THE TYPE OF GROUT BEING USED

The top factor on which the drying time depend is the type of grout which you are using. So before using and buying read out its customer guide completely

### SECOND FACTOR: HUMIDITY

Humidity is another factor on which dry of the grout depend. Humidity is present in the atmosphere. First you have to understand the mechanism of the healing. When the water present in the grout dries then we can say that it is fixed.

### THIRD FACTOR: TEMPERATURE

Temperature is a third factor on which the healing of the grout depend. If the temperature of the atmosphere is high then it will take little time than the ideal one to dry.
